

AI Use Declaration Form

Course: Introduction to Artificial Intelligence

Lab Title: Lab 4

Student Name: _Samuel Asare

Opong_____

Student ID: _____01432028_____

GitHub Repository Link: _____<https://github.com/SamuelOpong07/lab-4-llm-decision-support.git>_____

Date Submitted: _____16/08/26_____

1. AI Use Summary

Question	Student Response
Did you use any AI tool for this lab?	
Estimated percentage of the work influenced by AI	%10 - %15
Did you attach evidence of AI use where applicable?	

2. Details of AI Use

Complete the table below for each AI tool used. Add more rows where necessary.

Name of AI Tool Used	Purpose for Using the Tool	Prompt or Instruction Given to the Tool	Part(s) of the Work Influenced by the Tool	How I Verified, Edited, or Improved the AI Output
Claude	To aid in Part 0	“How do I tackle the lab setup”	Part 0	By comparing it with the instructions given by the lecturer
Claude	To aid in committing my work to github	“How do I tackle the submission checklist?”	The submission checklist	By comparing it with the instructions given by the lecturer

3. Attachment of AI Output Evidence

Where required, attach evidence of AI use. Tick all that apply. Add more rows where necessary.

Evidence Type	Attached? (Yes, No, N/A)	File Name
AI-generated draft	No	
Prompt history	No	
Screenshot of AI interaction	Yes	If you were on Colab instead, you'd skip <code>.env</code> entirely and use the Key/Secrets pane, then <code>from google.colab import userdata; api_key = userdata.get('OPENAI_API_KEY')</code>. No <code>.gitignore</code> concern there since Colab secrets never touch your repo. 4. requirements.txt <pre>openai python-dotenv pandas matplotlib</pre> Save that at the repo root. 5. Commit incrementally For Part 0 specifically: <pre>git add .gitignore requirements.txt git commit -m "Part 0: repo setup, requirements.txt, .env ignored" git push</pre> Notice <code>.env</code> is deliberately <i>not</i> in that <code>git add</code> — double check with <code>git status</code> before committing that <code>.env</code> doesn't show up as a tracked/staged file. A couple things worth checking before you move on: are you reusing the same venv from your other AI course labs, or starting a fresh one for this repo? And do you already have a GitHub PAT or SSH key set up for pushing, or ↓ you need help with that part too?

		1. Create the GitHub repo Go to GitHub → New repository → name it <code>lab-4-llm-decision-support</code> → set it Public check "Add a README" → Create. Then clone it down to wherever you keep your AI course work (sounds like alongside your existing <code>AI</code> folder with the venv): <pre>git clone https://github.com/SamuelOpong07/lab-4-llm-decision-support.git cd lab-4-llm-decision-support</pre> Put your notebook (<code>.ipynb</code>) in this folder once you've got it. 2. Sign up with a provider + get an API key Your <code>requirements.txt</code> list (<code>openai</code>) tells you the provider: OpenAI. Go to <code>platform.openai.com</code> → sign up/log in → API keys → Create new secret key. Copy it somewhere safe <i>once</i> — OpenAI won't show it to you again. 3. Never hard-code the key — here's the actual mechanism The reason <code>.env</code> + <code>.gitignore</code> works: <code>.env</code> is just a plain text file with <code>KEY=value</code> pairs sitting in your project folder. <code>python-dotenv</code> reads that file at runtime and loads it into environment variables your Python code can access — so your code never contains the literal key string. <code>.gitignore</code> tells Git "never track this file," so even if you <code>git add .</code>, <code>.env</code> gets skipped and never enters your commit history.
Exported AI conversation	No	
AI-generated code snippet	No	
Revised version showing student input	No	

4. Student Declaration

I declare that:

Declaration Statement	Response (Yes/No)
The submitted work is my own work.	Yes

Any use of AI tools has been clearly declared in this form.	Yes
The prompts, instructions, and AI-generated outputs have been disclosed where applicable.	Yes
I reviewed, tested, edited, and improved any AI-generated content before submission.	Yes
My AI usage does not exceed 25% of the entire work.	Yes
I understand that undeclared or excessive AI use may be treated as academic misconduct.	Yes
